

I wanted to give a brief update on Strafford County and Dover Community Covid data. This is for situational awareness only. The rate of transmission has trended upwards since July 22<sup>nd</sup>. All other metrics have increased as well. Strafford County is considered to be in the "Substantial" community transmission range according to the NHDPHS interactive maps on 8-6-2021 (date last available, data not reported over the weekend).

| Category                               | June 22, 2021 | July 22, 2021 | August 9, 2021 |
|----------------------------------------|---------------|---------------|----------------|
| Cases per 100l over 14 days            | 75.8          | 29.1          | 113.3          |
| Daily rate                             | 5.41          | 2.07          | 8.09           |
| Infection rate                         | .79           | 1.06          | 1.16           |
| Dover new cases over 14 days           | 23            | 10            | 36             |
| Dover active cases                     | 14            | 8             | 22             |
| 7 Day positively Rate Strafford County | 2.7%          | 2.3%          | 5.1%           |
| Dover positivity rate                  | DS*           | 2.8%          | 3.5%           |
