

DHS-CTC Building Project Questions from the City Council and School Board

1. What is the square footage of the footprint of the proposed building?
2. Is there going to be a steel frame, concrete block frame or poured concrete?
3. Is there going to be cement block, concrete façade, brick façade or something entirely different?
4. How big is the proposed gym?
5. How many seats in the auditorium?
6. How big will the stage be?
7. Will there be any separate buildings for the CTC?
 - a. where would they be located
 - b. same questions as to size, type of construction, etc as above..
8. Whereas there is a shortage of State Aid for new buildings and there is discussion of trying to get it back, is there some kind of petition that we can forward to the State asking that we be considered for State Aid to the new High School should that materialize. At least get the request in. With the monies being allotted in this State Budget, have we requested any State aid at all (no matter how much) from the upcoming budget probably stating the number of schools in the area that are affected by this project? Just curious. At least the request will be in there for referral should something come up in the near future--- even after completion to be considered for help.
9. Whereas we are using State Grant monies in this project, the following RSA's should be investigated 198 15b and 15 c and 155 A:2 The State Dept. of Ed may have to O.K. the plans and the cost.
